

SUMMARY

Engineer building AI systems, LLM tooling and developer infrastructure using Python and AI Agent Systems. Experience creating production applications, AI agents and local model workflows with modern AI-assisted development tools.

EXPERIENCE

- Exultsoft Technologies Pvt. Ltd.** Oct 2025 – Present
Mobile & Full Stack Developer India
 - Mobile & backend systems:** Developing Android and iOS applications with supporting backend APIs and MySQL databases for production use.
 - Product features:** Implemented authentication, order management and real-time workflows for a food ordering platform.
- Datapattern AI** Apr 2025 – May 2025
AI Engineering Intern India
 - AI modules:** Supported development of AI-driven features and integration of machine learning components into existing systems.
 - Data processing:** Handled data preparation pipelines and assisted with model integration tasks.
- Freelance Developer (Remote)** Aug 2024 – Oct 2025
Full Stack / AI Developer Remote
 - Client applications:** Delivered full-stack web applications and AI related projects for startups using React.js, Next.js, Node.js and Flask.
 - Automation:** Created Python automation scripts and scraping workflows using BeautifulSoup to streamline data collection tasks.

SELECTED PROJECTS

- Indus LLM Gateway — OpenAI-Compatible LLM Gateway (Go, Reverse Proxy, SSE, Multi LLM Supports):** Self-hosted LLM gateway exposing an OpenAI-compatible API for routing requests across multiple AI providers. Handles centralized authentication, API key quotas, prompt templating and session memory while streaming responses via SSE. Prometheus metrics added for usage monitoring and cost visibility.
- INDUS Terminal — Developer CLI System (Go, Streaming Pipelines):** Interactive developer terminal for API orchestration and command pipelines written entirely with the Go standard library. Includes custom shell prompt system, streaming pipelines using `io.Pipe`, built-in HTTP client with retry/backoff, and portable Windows installer with PATH integration.
- AI Recruitment Platform — AI Hiring Automation (Python, Streamlit, Gemini API):** AI-driven recruitment workflow that evaluates resumes, contacts candidates and schedules interviews automatically. Resume analysis powered by Gemini with role-specific evaluation logic, automated email communication through Gmail SMTP and interview scheduling through Zoom API.
- PodcastAgent — AI Multi-Speaker Podcast Generator (Python, Gradio, Gemini, TTS):** Application that converts written content into conversational podcasts with multiple AI speakers. Generates dialogue scripts automatically and synthesizes voices using Edge TTS and gTTS, producing downloadable audio through a real-time interface.
- AI Tutor — Local AI Study Assistant (Python, Streamlit, Ollama):** Privacy-focused study assistant running entirely on local LLMs through Ollama. Supports multiple models including Gemma, Llama and DeepSeek, generating explanations at different learning levels and creating quizzes with answer explanations without external APIs.
- DeepResearchAgent — Autonomous AI Research Agent (Python, Gradio, Gemini API):** AI research agent that performs web search, extracts information from multiple sources and generates structured research reports. Uses DuckDuckGo for automated search, BeautifulSoup for content extraction and Gemini for synthesizing results into Markdown and PDF reports with real-time progress tracking.

SKILLS

- Languages:** Python, Go, JavaScript, TypeScript, Bash
- AI / LLM Systems:** LLM APIs, RAG Pipelines, Prompt Engineering, Ollama (Local Models), Hugging Face Transformers, LangChain
- Backend & Frameworks:** Flask, Node.js, REST APIs, React.js, Next.js
- Infrastructure & Tools:** Git, GitHub, Supabase, Vercel and AI Vibe coding tools

EDUCATION

- Excel Engineering College, Tamil Nadu** India
Bachelor of Engineering – Computer Science and Engineering; CGPA: 7.56 Nov 2022 – May 2026
- Ram Dayal Subh Narayan High School, Chhapra** India
12th (Science); Marks: 57.6% Nov 2020 – Mar 2022

ACHIEVEMENTS

- **1st Place – AI Hackathon (Excel Engineering College & Payoda Technology Inc.):** Led a 6-member team to build an AI agent with chatbot and automated appointment scheduling within a 30-hour hackathon. Implemented secure backend workflows using Supabase Auth and RLS.
- **Software Engineer Certification – HackerRank (Dec 2025):** Cleared multi-stage coding assessments covering problem solving, SQL and REST-based system design using Python and JavaScript.

LEADERSHIP

- **Open-Source Contribution Program** Excel Engineering College
Technical Mentor & Coordinator Mar 2025
 - **Mentorship:** Conducted Git and GitHub training sessions and guided 100+ students in making their first open-source contributions and working on collaborative projects.
- **Techno-Debuggers Coding Contest** Excel Engineering College
Event Lead Apr 2025
 - **Event organization:** Organized a three-round coding competition (MCQs, coding and debugging) on HackerRank and managed event logistics with student volunteers.

CERTIFICATIONS

- **Generative AI – Databricks Academy:** Jul 2025
- **Enterprise Data Science – IBM:** Nov 2023
- **Career Essentials in Generative AI – Microsoft & LinkedIn:** Oct 2023
- **Programming in Python – CISCO:** Aug 2023
