

Hariom Kumar Pandit

hariompandit9999@gmail.com | github.com/hari7261

Summary

Production AI Agent Engineer with 2+ years of hands-on experience building LLM applications, AI agents, LLM infrastructure, developer tools, backend systems, and automation platforms. Experienced with OpenAI-compatible APIs, LLM provider routing, RAG pipelines, tool calling, streaming APIs, local LLMs, Python, and production back-end development. Focused on building reliable AI systems with authentication, observability, cost monitoring, and production-ready API architectures.

Experience

Exultsoft Technologies Pvt. Ltd.

Oct 2025 – Present

Software Development Engineer

India

- Developed production applications backed by REST APIs and MySQL databases.
- Implemented authentication, order management, and real-time application workflows for food-ordering products.
- Integrated backend APIs and application features, contributed to testing and debugging, and supported production releases.

Datapattern AI

Apr 2025 – May 2025

AI Engineer Intern

India

- Developed AI-driven application features and integrated machine learning components into existing software systems.
- Built data preparation pipelines and supported model integration, testing, and evaluation workflows.

Freelance Developer

Aug 2024 – Oct 2025

Software Development Engineer

Remote

- Built full-stack web applications and AI-powered solutions for startup clients using React.js, Next.js, Node.js, Python, and Flask.
- Integrated REST APIs, authentication, and database-backed features across multiple client applications.

Projects

Indus LLM Gateway — OpenAI-Compatible LLM Gateway | Go

- Built a self-hosted OpenAI-compatible LLM gateway for routing requests across multiple LLM providers.
- Implemented API authentication, API key quotas, prompt templating, session memory, and Server-Sent Events (SSE) streaming.
- Added Prometheus metrics for request latency, token usage, and LLM cost monitoring to improve system observability.

Niyuktii — Multi-Tenant AI-Powered Recruitment & Interview Automation Platform

- Built an end-to-end multi-tenant recruitment platform automating job publishing, candidate applications, resume processing, AI-powered candidate evaluation, JD matching, interview scheduling, candidate communication, and recruitment tracking, reducing repetitive manual work for hiring teams.
- Implemented Super Admin and tenant-level controls for feature enablement, configurable automation, company branding, isolated candidate data, and recruitment workflows, providing a flexible and easy-to-use experience for recruiters and administrators.
- Engineered automated interview orchestration for availability matching, meeting creation, calendar synchronization, notifications, and status updates, with failure tracking, idempotent retries, activity auditing, and recovery workflows to prevent duplicate operations.

Niyojitaa – Autonomous AI Email Operations Platform — Multi-Tenant Agentic AI & Human-in-the-Loop Email Automation

- Engineered a multi-tenant AI email operations platform that monitors Gmail and Microsoft 365 mailboxes, classifies incoming emails, retrieves tenant-scoped knowledge, and generates context-grounded response drafts using Google Gemini.
- Built a human-in-the-loop approval workflow with draft versioning, deterministic policy validation, role-based access control, and immutable audit trails, ensuring AI-generated responses require explicit human approval before transmission.
- Implemented a PostgreSQL-backed durable job queue with SKIP LOCKED, asynchronous webhook processing, exponential retry backoff, dead-letter handling, and idempotent execution, while enforcing tenant isolation through PostgreSQL RLS and AES-256-GCM encrypted OAuth credentials.

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, Bash

Generative AI / LLM: LLM APIs, OpenAI-Compatible APIs, RAG, AI Agents, Agentic Workflows, Tool Calling,

Function Calling, Prompt Engineering, Loop Engineering, Local LLMs, Ollama, Hugging Face Transformers, Multi - modal Agents, Third party integration

Backend / Systems: REST APIs, Streaming APIs, Server-Sent Events (SSE), API Design, Authentication, JWT, Concurrency, System Design,

Frontend: React.js, Next.js

Databases: MySQL, PostgreSQL, Supabase

Infrastructure / Tools: Git, GitHub, Flask, Node.js, Vercel, Prometheus, Observability, Google console

Education

Excel Engineering College, Tamil Nadu <i>Bachelor of Engineering in Computer Science and Engineering; CGPA: 7.56</i>	Nov 2022 – May 2026 <i>India</i>
Ram Dayal Subh Narayan High School, Chhapra <i>12th, Science; Marks: 57.6%</i>	Nov 2020 – Mar 2022 <i>India</i>

Achievements

- **1st Place – AI Hackathon:** Led a 6-member team to build an AI agent with chatbot and automated appointment scheduling within a 30-hour hackathon. Implemented secure backend workflows using Supabase Auth and Row Level Security (RLS).
- **Software Engineer Certification – HackerRank (Dec 2025):** Completed multi-stage coding assessments covering problem solving, SQL, and REST-based system design using Python and JavaScript.

Leadership

Open-Source Contribution Program <i>Technical Mentor and Coordinator</i>	Mar 2025 <i>Excel Engineering College</i>
• Conducted Git and GitHub training sessions and guided 100+ students through their first open-source contributions and collaborative development workflows.	
Techno-Debuggers Coding Contest <i>Event Lead</i>	Apr 2025 <i>Excel Engineering College</i>
• Organized a three-round coding competition covering MCQs, coding, and debugging on HackerRank and coordinated event logistics with student volunteers.	

Certifications

- **Generative AI** – Databricks Academy, Jul 2025
- **Enterprise Data Science** – IBM, Nov 2023
- **Career Essentials in Generative AI** – Microsoft and LinkedIn, Oct 2023
- **Programming in Python** – Cisco, Aug 2023
